

THE PROBLEM

A CCTV-and-server install costs about ₹2 lakh.

Small construction sites and factories don't have that. So nobody is watching the press, the pit or the fire exit — and the first anyone hears about a breach is after someone is hurt.

WHY THIS IS DIFFERENT

Every camera safety system on the market is a witness. Ours is a guard.

FORENSIC

Documents the breach

Records what happened so you can review it later. The accident still happened.

PREVENTIVE

Stops the breach

Tracks where a person is heading, predicts the crossing **0.75 seconds early**, and speaks a warning out loud. It logs a breach only when the warning failed.

LIVE ON THIS PHONE — AEROPLANE MODE ON

Watch it happen.

- 1 Phone propped at the hazard. Aeroplane mode, visibly on.
- 2 Draw the danger zone. One drag on the screen.
- 3 Walk toward it. It warns before the line is crossed.
- 4 Cross anyway. Breach logged, with a photo.
- 5 Open Alerts. Every warning and breach, with its photo.
- 6 One tap — shift report, faces blurred, written on the phone.

HOW IT WORKS

Every step runs on the handset.

Camera

`getUserMedia`

Detect people

`COCO-SSD · TF.js`

Track

`IoU tracker`

Predict

`0.75s projection`

Speak

`on-device TTS`

Report

`.docx, written here`

The model ships **inside the APK** — 20 MB of weights, loaded from the phone's own storage. Switch the network off and nothing changes, because nothing was using it.

USING THE PHONE AS A PHONE

Speaker, camera, storage — the whole system is one handset.

- **The speaker is the safety device.** A warning nobody hears is just a log entry. This is why the phone has to be in the room rather than in a server cupboard.
- **Nothing is uploaded.** Only a photo of the moment a rule broke, kept here.
- **The log survives** a lock, a reload, the app being swiped away. It is the site's log book, and it is on the site.

THE NUMBER THAT MATTERS

9

WARNINGS CALLED OUT

3

BREACHES THAT STILL HAPPENED

67%

INCIDENTS PREVENTED

No forensic system can report that middle column, because it never tried to stop anything. **Prevention is the product.**

WHAT IT DOES NOT DO YET

Said plainly.

- **No hard-hat or vest detection.** The detector knows people and objects, not PPE. Same pipeline, fine-tuned model — but it isn't there today.
- **The report blurs the whole frame,** not detected faces. Masking only detections makes anonymity depend on the detector succeeding, and it misses. This fails closed.
- **One camera, one angle.** It watches what you point it at.

CLOSE

No cloud.

No server.

No subscription.

This is the phone.

A site with no network and no budget can run this today.
